### Treprostinil Injection is available through the Specialty Pharmacy (SP) provider listed on page 7.

**Complete all sections on this enrollment form.** Let your patient know that the Specialty Pharmacy will be calling to process their prescription and that it is important to answer or return any messages.

Sign the Statement of Medical Necessity on page 3 for the Prescription.

Sign at the bottom of pages 4 and 5.

Fax the enrollment form and signed supporting documents (use Fax Cover Sheet provided on page 7) to the SP.

Information regarding the Centers for Medicare and Medicaid Services (CMS) established and expected coverage criteria for prostacyclin is included for your convenience.

### MEDICARE COVERAGE CRITERIA FOR PROSTACYCLIN

### The current Local Coverage Determination for Prostacyclin is as follows:

The pulmonary hypertension is not secondary to pulmonary venous hypertension (e.g., left sided atrial or ventricular disease, left sided valvular heart disease, etc.) or disorders of the respiratory system (e.g., chronic obstructive pulmonary disease, interstitial lung disease, obstructive sleep apnea or other sleep disordered breathing, alveolar hypoventilation disorders, etc.); and

The patient has idiopathic/heritable pulmonary hypertension or pulmonary hypertension which is associated with one of the following conditions: connective tissue disease, thromboembolic disease of the pulmonary arteries, human immunodeficiency virus (HIV) infection, cirrhosis, diet drugs, congenital left to right shunts, etc.

### If the above conditions are present, the following criteria must be met:

The pulmonary hypertension has progressed despite maximal medical and/or surgical treatment of the identified condition; and

The mean pulmonary artery pressure is greater than 25 mm Hg at rest or greater than 30 mm Hg with exertion; and

The patient has significant symptoms from the pulmonary hypertension (i.e., severe dyspnea on exertion, and either fatigability, angina, or syncope); and

Treatment with oral calcium channel blocking agents has been tried and failed or has been considered and ruled out.

Medicare coverage criteria provided for informational purposes only. Please check with the payer to verify billing requirements. Liquidia and Sandoz do not make any representation or guarantees concerning reimbursement or coverage for any service or item.

## 🕲 Liquidia

Page 6 of 7

### **INDICATION**

Treprostinil injection is a prostacyclin mimetic indicated for

- Treatment of pulmonary arterial hypertension (PAH), World Health Organization (WHO) Group 1, to diminish symptoms associated with exercise. Studies establishing effectiveness included patients with New York Heart Association (NYHA) Functional Class II-IV symptoms and etiologies of idiopathic or heritable PAH (58%), PAH associated with congenital systemic-to-pulmonary shunts (23%), or PAH associated with connective tissue diseases (19%).
- Patients who require transition from epoprostenol to reduce the rate of clinical deterioration. The risks and benefits of each drug should be carefully considered prior to transition.

### **IMPORTANT SAFETY INFORMATION**

### CONTRAINDICATIONS

None.

### WARNINGS AND PRECAUTIONS

- Chronic intravenous (IV) infusions delivered using an external infusion pump with an indwelling central venous catheter are
  associated with the risk of bloodstream infections (BSIs) and sepsis, which may be fatal. Therefore, continuous subcutaneous (SC)
  infusion is the preferred mode of administration.
- Do not abruptly lower the dose or withdraw dosing.
- Treprostinil injection may cause symptomatic hypotension.
- Titrate slowly in patients with hepatic insufficiency because such patients will likely be exposed to greater systemic concentrations relative to patients with normal hepatic function.
- Treprostinil injection inhibits platelet aggregation and increases the risk of bleeding.

### **ADVERSE REACTIONS**

During clinical trials with SC infusion of treprostinil, infusion site pain and infusion site reaction (e.g., erythema, induration, or rash) were the most common adverse events and occurred in majority of those treated with treprostinil. Infusion site reactions were sometimes severe and led to discontinuation of treatment. Rash and hypotension (14% and 4%, respectively) were also commonly reported with SC infusion of treprostinil. Other common adverse events ( $\geq$ 3% more than placebo) included headache, diarrhea, jaw pain, edema, vasodilatation, and nausea, and these are generally considered to be related to the pharmacologic effects of treprostinil, whether administered subcutaneously or intravenously. The adverse reactions reported with treprostinil IV included bloodstream infections, arm swelling, paresthesia, hematoma, and pain.

#### **DRUG INTERACTIONS**

Treprostinil injection dosage adjustment may be necessary if inhibitors or inducers of CYP2C8 are added or withdrawn.

### **USE IN SPECIFIC POPULATIONS**

- Safety and effectiveness of Treprostinil injection in pediatric patients have not been established.
- It is unknown if geriatric patients respond differently than younger patients. Caution should be used when selecting a dose for geriatric patients.
- There are no adequate and well-controlled studies with Treprostinil injection in pregnant women.
- It is not known whether Treprostinil injection is excreted in human milk.

Please see accompanying full Prescribing Information for additional safety information, also available by clicking here.
